

ATLS[®] vs standard care trial

Trial management group meeting, 2024-01-10

Agenda

- Protocol version 0.4.0 – revision of hospital versus cluster definitions
- Hospital and cluster screening process
 - How should we view participation in the pilot? Data collection stopped in January 2023
 - Schedule screening interviews with Cooper and Rajawadi Hospital
 - Discuss
 - [All India Institute of Medical Sciences, Mangalagiri](#)
 - [Christian Medical College and Hospital Ludhiana](#)
 - [Government Medical College & Hospital, Chandigarh](#)
 - [Himalayan Institute of Medical Sciences, Uttarakhand](#)

Notes

- The revised cluster definition was shared. Martin raised the point that it might be clearer to also have eligibility criteria on the hospital level, to facilitate the screening process.
- We discussed how we should think about hospitals that also participated in the pilot. Because we only trained a small number of physicians in that pilot we decided that these hospitals can be included as long as they still fulfill the eligibility criteria of this full scale trial.
- We discussed the four hospitals listed above and agreed that they should be contacted for a more detailed screening interview.
- Martin announced that this group will be considered the trial management group and will meet monthly to bi-monthly.
- Karla raised the point of the database and Abhinav responded that it will be set up by TGI, most likely using REDCap but depending on the tone of the agreement (collaborative vs more service oriented) we might need to use a different database. Martin will share the data dictionary with TGI.
- Karla also raised the point of having a statistician at KI review the database and data dictionary.

Decisions

- Hospital eligibility criteria will be added to the protocol.
- Hospitals that participated in the pilot can participate in this full-scale trial as long as they fulfill the eligibility criteria.
- More detailed screening interviews will be scheduled with the six hospitals listed above.
