ATLS® vs standard care trial

Abhinav Bassi, Martin Gerdin Wärnberg

- Abhinav will send an email that Martin will confirm to get the resources allocated from TGI's end. Martin will need to double check the email with KI admin before confirming.
- We discussed the budget in relation to the funding received. Abhinav will send an updated budget with the costs for the two first years calculated. Abhinav will also prepare an ideal budget for use in future grant applications.
- We also discussed how to move forward with the HMSC application and trial registrations. Martin will register the trial with ClinicalTrials.gov. Once the ID is ready we can use that for the HMSC application.
- Martin will send the agreement template that KI legal most likely will use, which include an IP clause that TGI might want to revise.
- In general, the process will be more straightforward if the project is framed as a collaborative research project rather than pure service provision from TGIs end.
- We discussed data collection and if the project is a collaborative project than TGI can use RedCAP for data collection. Martin will ensure that a data dictionary is created. Abhinav will factor in additional data management costs in the ideal budget and attempt to cover some of those costs within the current budget.
